

INTRODUCTION TO TRANSFORMER EMBEDDED OPERATING SYSTEM (ETOS)

Dr. Pedram Elhaminia

DRAMATIC CHANGES IN THE T&D ENVIRONMENT

Decarbonization

↓ CO₂

Decentralization

From centralized power-generation & unidirectional grid-utilisation to decentral and distributed energy systems & multidirectional balancing

TRANSFORMER: CENTRAL NODE & ASSET

Most of the actual
challenges pointing
to transformers

TRANSFORMER

Operation complexity perspective

- | Transformer as a grid node per se
- | Grid node must-haves are flexibility, overload capability and contribution to grid stability

Asset criticality perspective

- | Most valuable single asset in the T&D system
- | Critical replacement-time and -effort
- | Average fleet age > 40 years in mature T&D-environment

Transformer attributes & abilities
are mission critical in the new T&D environment

ENERGY T&D ECOSYSTEM

subsystem
requirements

Vertically
connected

Common
agenda

DRIVEN BY

Decarbonization

Decentralisation

Volatility

Complexity

Uncertainty

GRID OPERATOR

Master volatility

- | Switching off / redispatch is no option
- | Asset overload capability is mandatory
- | Get input to support decision making and system stability

Manage threats, recover fast

- | Prevent hazards & cybercrime
- | Master abnormal conditions

Optimize asset utilization

- | Manage fleet and assets based on state and risk estimation
- | Link asset lifetime consumption with decision making for grid operation

TRANSFORMER MANUFACTURER

Cloud and / or edge

Variety of makes, standards, protocols

- | Data collection, interpretation, storage
- | Visualization

Monitoring, control, regulation functions

Variety of makes, standards, protocols

-  Transformer monitoring
-  Dissolved gas analysis (DGA)
-  OLTC monitoring
-  Bushing monitoring
-  Voltage regulation
-  Cooling fan & pumps

Intelligent sensors and accessories

Variety of makes, standards, protocols

Control cabinet pain points

- | Specification conformity
- | Specification variety
- | Order change management
- | Engineering (elect., mech.)
- | Cabinet (IP xy)
- | Panel interior (terminals, relays..)
- | Wiring (inside & from/ to cabinet)
- | Makings, codings, colors
- | Testing
- | Make-, buy-logistics

Challenge: transformer
control cabinets and
marshalling boxes

TRANSFORMER MANUFACTURER

Optimize value chain

- | Reduce complexity & cost
- | Improve \$/MVA -competitiveness

Gain a competitive edge

- | Provide resilience and support fast disaster recovery
- | Provide overload capability

Meet digital demands

- | Offer customized solutions for data-driven grid & asset management

75°

8MVA

COMPONENT SUPPLIERS

Primary components:

- | OLTCs
- | Winding
- | Insulation (solid & liquid)
- | Bushings

Secondary functions:

-  Transformer monitoring
-  Dissolved gas analysis (DGA)
-  OLTC monitoring
-  Bushing monitoring
-  Voltage regulation
-  Cooling fans & pumps

Sensors and accessories

Pain points

- | Primary arena driven by price & feature dumping rather than complexity reduction & digital enabling
- | No visible focus in the secondary arena: broad spectrum of disintegrated secondary functions, sensors and accessories ranging from simple measuring devices to high-end analytical systems
- | No or unsafe link to next level data and communication
- | No opportunity to offer added value by upstream integration or smart cross-level solutions

Challenge supplier integration:
safe data interface and
open protocols needed

COMPONENT SUPPLIERS

Integrate seamlessly

- | Connect via central communication interface and standard protocols

Create new business models

- | Access fully open data interface
- | Develop digital expert solutions, e.g. OEM-specific thermal transformer modeling or gas-in oil expert system

WHAT IF...

Energy admin
& regulator

Grid operators
& asset
managers

Transformer
OEMs

Enablers &
component
suppliers

Master volatility,
recover fast,
optimize asset
utilization

Facilitate intelligent
grid operation and
asset management

Integrate
seamlessly,
create new
business models

Cooling fan & pumps

KNOW THE STATUS

Anytime & Anywhere

- | No-frills web-browser visualization
- | Intuitive user-interface
- | Simple integration of whole asset fleet in a central browser application

Easily

- | Customize transformer design and function using our flexible modules
- | Integrate your own hard- and software using open protocols, up- & downstream
- | Develop custom program extensions using TPLE function
- | Create new digital business opportunities

LEVERAGE SYNERGIES

from Integration

- | Eliminate separate cabinets and housings
- | Eliminate mechanical drive shaft through optional innovative top drive
- | Save working hours, gain space
- | Reduce interfaces, connect easier
- | Save copper cables, use glass fibre

ZERO System-Cost Impact For Transformer Manufacturers

Save Costs and Time by Integration

Voltage regulation

Integration in ETOS[®] cabinet
instead of separate device

up to
65%

Transformer & DGA Monitoring

Integration in ETOS[®] cabinet
instead of separate device

up to
75%

Substation SCADA wiring

Via glasfiber
instead of copper cables

up to
70%

Installation of top drive

Instead of drive with
mechanical drive shaft

up to
50 h

A Certainty

- | State-of-the-art standards, audited according to BDEW
- | Security-focused product architecture
- | Proactive security management by CERT team
- | Full data control thanks EDGE, cloud is an option, not mandatory

Additional functions

- | visualization and communication
- | Integration of a standard cooling control cubicle
- | Integration of an oil filter unit

* Optional application

Transformer monitoring

● Standard functions (included in each ETOS[®] scope of supply)

- | Status monitoring RS2001, Buchholz relay, PRD, oil filter monitoring
- | Monitoring of oil temperature
- | System voltage, load current, frequency, load factor, active power, reactive power, apparent power
- | Hot-spot calculation in accordance with IEC 60076-7 or ANSI/IEEE C57.91
- | Calculation of aging rate and loss-of-life
- | Tap position capture

⊕ Extended functions

- | Capability of transformer to handle overload in the short or long term with live calculation and simulation of overload forecasts in accordance with IEC 60076-7 or ANSI/IEEE C57.91
- | Calculation of the bubbling temperature
- | Calculation of paper moisture content

Bushing monitoring

⊕ Functions

- | Monitoring of changes in C1 capacitance
- | Monitoring of the dissipation factor ($\tan\delta$)
- | Preset limits for optimal monitoring
- | Recording system voltage for effective elimination of network imbalances
- | Elimination of temperature influences by using the innovative double-reference method
- | For new transformers or retrofit

Continuous status monitoring
of bushings

Zurück

Online Dissolved Gas Analysis (DGA)

⊕ Functions

- | Online recording of up to nine dissolved gases, relative moisture in oil, and relative overall gas content
- | Configurable limit value for each gas
- | Curve display of the measured values
- | Measured value memory
- | Universal 4...20mA or Modbus RTU interface for capturing the DGA sensor signals
- | Evaluation in accordance with Duval, Rogers, Dörnenburg, IEC60599

OLTC Monitoring

+ Basic functions

- | Status monitoring of the motor-drive signals
- | Maintenance recommendations / maintenance interval calculation for OILTAP[®] / VACUTAP[®]
- | Calculation of contact wear for OILTAP[®]
- | Tap-position statistics for the OLTC (number of tap-change operations per tap, duration per tap)
- | Monitoring of OLTC oil temperature

+ Extended functions

- | Motor Current Index in accordance with IEEE PC57.143

Cooling system control and monitoring

⊕ Intelligent cooling system monitoring

- | Number of starts per cooling level
- | Monitoring of R_{th} and cooling efficiency
- | Operating time per cooling level
- | Monitoring of motor protective switches

⊕ Intelligent cooling system control

- | Switching points, hysteresis and delay times adjustable to your needs
- | Various control algorithms
 - | Periodic cooling group activation or
 - | Predictive cooling
- | Fail-safe mode
- | Optionally available as frequency-controlled for higher cooling efficiency and less wear of ventilators

⊕ Integration of complete conventional transformer cooling system control

- | Including motor protective switches and fuses; for 1, 2 or more cooling stages
- | Can be connected to the intelligent cooling control functions such as predictive cooling

Automatic voltage regulation

+ Basic functions

- | Measurement of system voltage and load current (one-phase or three-phase)
- | One desired value
- | Voltage regulation with linear delay time T1
- | Status of the motor-drive unit

+ Extended functions

- | Various types of desired-value setting (3 or 5 desired values, TAPCON[®] Dynamic Setpoint Control, desired-value setting via analog value, raise/lower pulse, desired value via BCD)
- | Automatic voltage regulation with linear or integral time characteristics and two delay times T1 and T2
- | Parallel operation via CAN bus (up to 16 transformers)
- | Line-drop compensation (R-X or Z compensation)
- | Monitoring of bandwidth
- | Function monitoring
- | Limit-value monitoring

ETOS[®]: Stand-alone variant

- | Housing made of aluminum sheet, up to IP protection class 66
- | Supports passive cooling thanks to its double-walled design
- | Corrosion protection class up to CX acc. to ISO 12944-9
- | Variable mounting points
- | Vibration absorber ¹

- | UV-resistant inspection window, information visible from outside ¹

- | Integrated laptop holder
- | LED cabinet lights

- | Display unit with tap position indication ¹
- | Mechanical operations counter and status LEDs ¹

- | User interface with integrated socket and service interface

- | Different cabinet sizes available

¹ Only for some cabinet sizes and variants

ETOS[®] TD: Innovative On-Load Tap-Changer top drive

Simplified assembly

- | No mechanical linkage (drive shafts)
- | Fast connection of motor and control cabinet by plug connection
- | No manual centering required

Smart functions

- | Automatic synchronisation of the on-load tap-changer with the drive
- | Electronic end position locking
- | OLTC PreCheck function to avoid damage to the tap changer
- | Automated monitoring and cost reduction through advanced ISM[®] technology

Flexibility

- | due to modular design, individually expandable

[Zurück](#)

ETOS[®] ED: Intelligence in classic side drive

- | Reliable drive of the on-load tap-changer, proven drive technology
- | Combined with state-of-the-art automation components
- | Many additional functions available for intelligent monitoring, control & regulation of the power transformer
- | Double-walled design of the housing supports passive cooling
- | Flexibility through modular design, individually expandable

[Zurück](#)

ETOS[®] IM: Rugged automation hardware

Flexible plug-in modules

- | The modular and powerful design for tough requirements in energy technology
- | Specific modules for each task
- | Support of all common interface standards, e. g. IEC61850 protocol
- | Operating ambient temperature -25°C to +70°C
- | Flexible power supply through wide-range power supplies

- | Designed for the harsh ambient conditions directly on the transformer
- | Reliable service life of 15-20 years
- | Builds on > 40 years of experience with transformer automation

ETOS[®] IM: Intuitive Software

Individually expandable

- | Robust operating system as the basis for all system and application functions
- | Database with actual and historical operating data as well as status and log information
- | No software installation necessary - cutting-edge, web-based visualization (HTML 5 and SVG)
- | Individualization, self-programmable, digital and analog inputs and outputs
- | Easy backup of software and configuration (directly on USB or on PC)
- | All necessary control station protocols
- | Intuitive operation, field tested

CYBERSECURE BY DESIGN

State-of-the-art standard

- | External & independent audits in accordance with BDEW^{*)}

Support

- | Explicit customer interface for IT security
- | Product security management by the CERT team
- | Proactive management of security flaws

Product architecture

- | Pre-configured, integrated firewall in accordance with IEC 62443
- | SSL/TLS (HTTPS) encryption (256-bit) in accordance with BSI TR 02102
- | "Role-Based Access Control (RBAC)" role-based user management in accordance with IEC 62351
- | Password management in accordance with NERC-CIP
- | Defense in depth
- | Ability to deactivate hardware interfaces that are not necessary
- | Integrity of firmware, software and data

^{*)} Whitepaper: Requirements for Secure Control and Telecommunication Systems, BDEW association Germany

ETOS[®] ADDITIONAL FUNCTIONS

Communication & Visualization

Additional functions

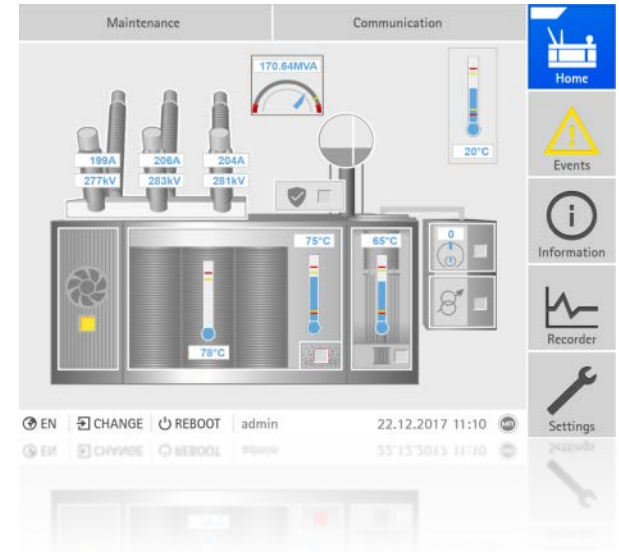

- I DIO configuration - freely programmable digital inputs and outputs
- I AIO configuration - freely programmable analog inputs and outputs
- I TPLE – Program by yourself easily with function blocks

Visualisation

- I Visualization via web server (SVG and HTML 5) for various end devices included as standard. No software installation needed.

Communication protocols

- IEC61850 Ed. 1 und Ed 2. MMS und GOOSE
- IEC60870-5-101, -103, -104
- DNP3
- Modbus TCP, RTU, ASCII

ETOS[®] ADDITIONAL FUNCTIONS

ETOS[®] Displays: Fits for every application

- | Fast installation plug and play in the station building
- | Intuitive graphical menu structure for user-friendly operation
- | 19" rack control elements (e.g. switch button "higher" & "lower") are digitally available in the touch panel display
- | Connection of up to 10 MR automation products
- | Modern web technology, access possible from any device
- | Flexible MControl[®] Touch Panel Display from MR in two versions:
 - | Resistive 7" display (top hat rail mounting for integration in motor drive housing or control cabinet)
 - | Capacitive 10" display

19" top-rail mounting display unit

10" touch display

7" touch display

MR SOLUTIONS ON THE PROCESS LEVEL: SENSORS & DEVICES

MESSKO®

Conventional Sensors

MSENSE®

Intelligent Sensors

MESSKO®

Protective Devices / Accessories

3rd Party Devices

MESSKO®: conventional sensors

Temperature monitoring (for oil and winding)

- I MESSKO® COMPACT and TRASY2
 - I Bourdon spring technology: very precise and less aging-prone
 - I Measurement, displaying, reporting alarms, communication (up to 6 freely adjustable microswitches)
- I MESSKO® BeTech
 - I Bellows technology, unpressurized fluid
 - I optional remote measured value transmission, up to 5 independently adjustable switches (250V/15A) with selectable hysteresis

Level monitoring (for oil)

- I MESSKO® MTO
 - I Level measurement in oil expansion vessel keeping sensor and display separate
 - I Flexible types of the floating unit - radial or axial, 2 or 3 limit switches, adjustable or fixed
- I MESSKO® MMK
 - I Robust magnetic level indicator without float in the tank
 - I Optional limit contacts and remote transmission of measured values, retrofittable to DIN 42 552

MSENSE[®]: intelligent sensors

Hydrogend, carbon monoxide, moisture level monitoring

MSENSE[®] DGA

- | Detects primary early indicators of thermal and electrical damage
- | Extremely precise and independent of environmental influences due to innovative 2-step measuring method

Bushing monitoring

MSENSE[®] BM

- | Innovative, field-tested 2/3 reference method: Monitors the condition in terms of changes in capacitance and dissipation factor
- | Eliminates the influence of temperature- and voltage fluctuations

Direct winding temperature monitoring

MESSKO[®] MTec EPT303 FO

- | Directly measures at the source and communicates the temperatures
- | Up to 32 innovative MESSKO[®] MSpot[®] – glass-fiber sensors

MESSKO®: Protective devices and accessories

Maintenance-free dehydrating breather

I MESSKO® MTrab®

- I For oil-insulated transformers, reactors and tap changers
- I Sensor controlled regeneration of the drying agent with self-regulating heating element

Protection against critical events

I MESSKO® MSafe®

- I Buchholz relay triggers if gas accumulates or if there is a sudden increase in flow speed, as well as in the event of oil loss

I MR RS2001

- I Relay activates when the specified speed of oil flow between the on-load tap-changer head and oil conservator is exceeded due to a fault. Tried-and-tested thousands of times worldwide

I MESSKO® MFloC®

- I Monitors the flow of coolant in the oil-water cooling, reports pump failure instantly

Pressure relief device

I MESSKO® MPreC®

- I If the permissible valve activation pressure is exceeded, the device opens within milliseconds. Different contact variants available

MR SOLUTIONS ON THE CONTROL LEVEL: TESSA[®]

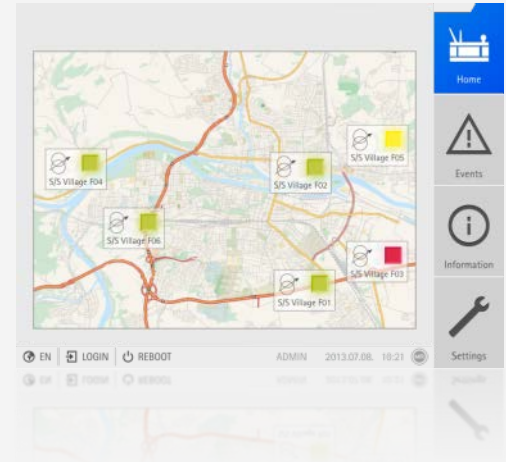

CONTROL LEVEL

Cloud

SCADA

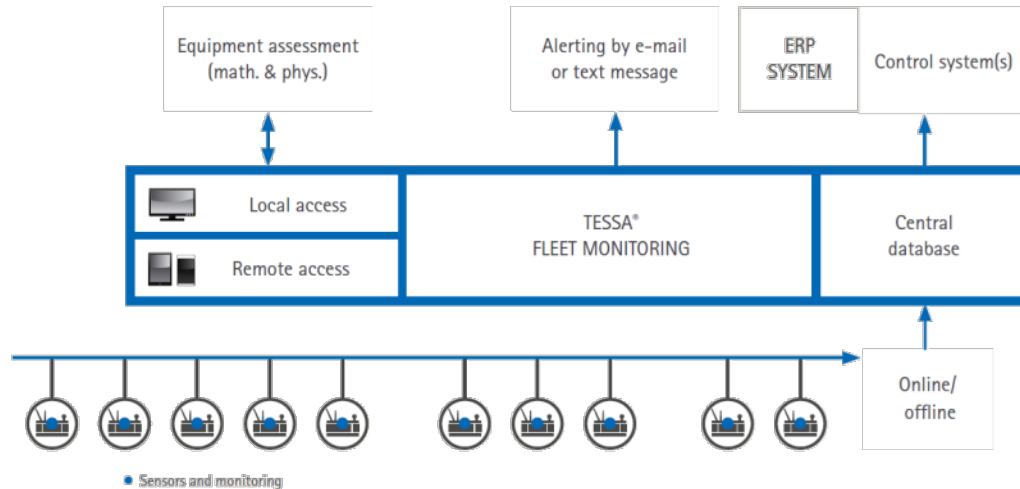

TESSA[®]

MR SOLUTION FOR THE CONTROL LEVEL

Fleet monitoring TESSA®

- | Automated real-time monitoring of all equipment, 24 / 7
- | Central database with trend monitoring and equipment comparison
- | Early, cost-effective elimination of consequences instead of cost-intensive repairs
- | Savings in service activities, e.g. by extending maintenance intervals or reducing plant inspections

• Sensors and monitoring

ADVANTAGES FOR TRANSFORMER MANUFACTURERS

Comissioning & service

- | Documentation and commissioning wizard available right on the device
- | Simple retrofitting
- | Predictive maintenance
- | Dedicated training and services available

Installation & testing

- | Reduced user-orientated interfaces, gain in efficiency
- | Benefit from automatic calibration testing and commissioning wizards

Offer preparation

- | Meet customer specifications through open & modular concept
- | Fast & flexible price calculations and technical statements
- | All documentation speedily at hand

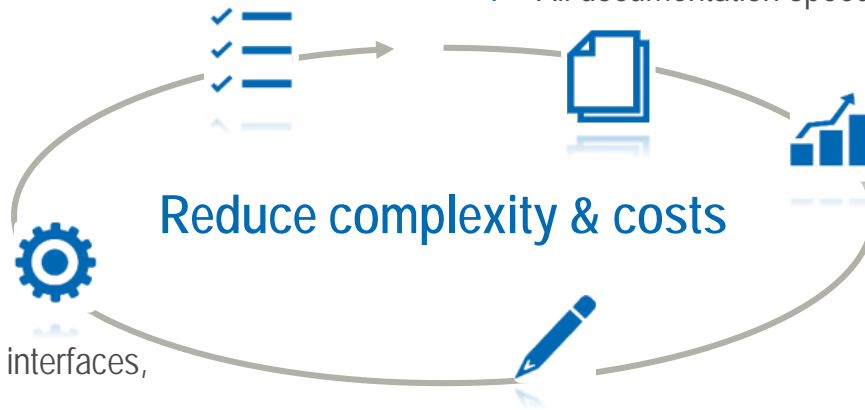

Engineering & documentation

- | One contact partner for secondary technical concept
- | Open standards facilitate connection of sensors & devices
- | Increase efficiency through function integration and innovative top drive

Reduce complexity & costs

Logistics & procurement

- | Raise planning security through our reliable logistics service

THE POWER BEHIND POWER.
